

Silicon 3.0 Watt Zener Diode

DESCRIPTION

The SMAJ5913Be3 – SMAJ5956Be3 series of surface mount 3.0 watt Zeners provides voltage regulation in a selection from 3.3 to 200 volts with different tolerances as identified by suffix letter on the part number. It is equivalent to the JEDEC registered 1N5913B through 1N5956B series with identical electrical characteristics except it is rated at 3.0 W instead of 1.5 W with the lower thermal resistance features of this surface mount packaging. These plastic encapsulated Zeners have a moisture classification of Level 1 with no dry pack required.

Important: For the latest information, visit our website <http://www.microsemi.com>.

NOTES:

- Suffix B (shown) denotes a +/-5% tolerance on nominal V_Z , A denotes a +/-10% tolerance, C denotes a 2% tolerance, and D denotes a +/-1% tolerance.
- Zener voltage (V_Z) is measured at $T_L = 30^\circ C$ and 90 seconds after application of dc current.
- The Zener impedance is derived from the 60 Hz ac voltage, which results when an ac current having an rms value equal to 10% of the dc Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK} .
- The maximum dc current (I_{ZM}) is based only on the maximum power of 3.0 watts at $T_L \leq 105^\circ C$. These values must be reduced by 48% (1.56 W) when mounted on PC boards as described in [Maximum Ratings](#).
